

PREDATOR ARCHERY

Congratulations on purchasing your brand new Predator Archery Kingfisher Compound Bow!

Predator Archery is proud to introduce the newest member of it's prestigious lineup of compound bows. The Predator Archery Kingfisher was designed specifically for bowfishing and with it's fully adjustable cams, it makes for the perfect fit for any archer big or small! Be sure to register your new bow online for a lifetime manufacturer warranty.

We always recommend taking your new bow to a professional archery pro shop for the initial setup.

ADJUSTING DRAW LENGTH

You can adjust the draw length using the chart below. When adjusting draw length, first loosen the lock screw in the middle of the cam, remove the draw length screw completely. Next, turn the module to the desired draw length hole then reinstall the draw length screw. Place blue lock tight on screws to prevent them from vibrating loose, then tighten both screws snug.

ADJUSTING DRAW WEIGHT

This bow has approx. 30lb-60lb weight adjustment range. Adjust the draw weight by either loosening or tightening the bolts on the limb pockets that fasten the limbs to the riser. Turn the bolts clockwise to increase draw weight and counter-clockwise to decrease the draw weight. ALWAYS MAKE SURE TO ADJUST BOTH BOLTS EVENLY!!

(When holding the bow properly, the hole closest to the archer is #1 while the hole closest to the riser is #12)

Screw Number	1	2	3	4	5	6	7	8	9	10	11	12
Draw Length	26.25"	27"	27.25"	27.75"	28.25"	28.75"	29"	29.75"	30"	30.5"	31"	31.25"
